Model 26.0 projection weights: empirical five-year mean comparison

Equal-year mean of prepared fishery input weights,2020-2024; same mean used for catch and SSB.

2026 fishery age 3 = 0.644 kg; previous projected age 3 = 0.370 kg; empirical mean age 3 = 0.430 kg.
Population weights, fitted starting abundance, M, maturity, selectivity, and recruitment assumptions are preserved.
