Age-3 sensitivity to recent BTS observation errors

Only BTS observation SDs for 2025-2026 are doubled; observed means and fishery inputs are preserved.

Points: unchanged observations. Lines: modeled weights. Ribbons: conditional approximate 95% intervals.
Fishery 2026 weights are predictions without fishery observations; 2027-2028 are forecasts.
The dashed line marks the end of assessment year 2026. The original run remains the baseline.
